

NATALIA PROJECT

HOW THE NATALIA PROJECT WORKS

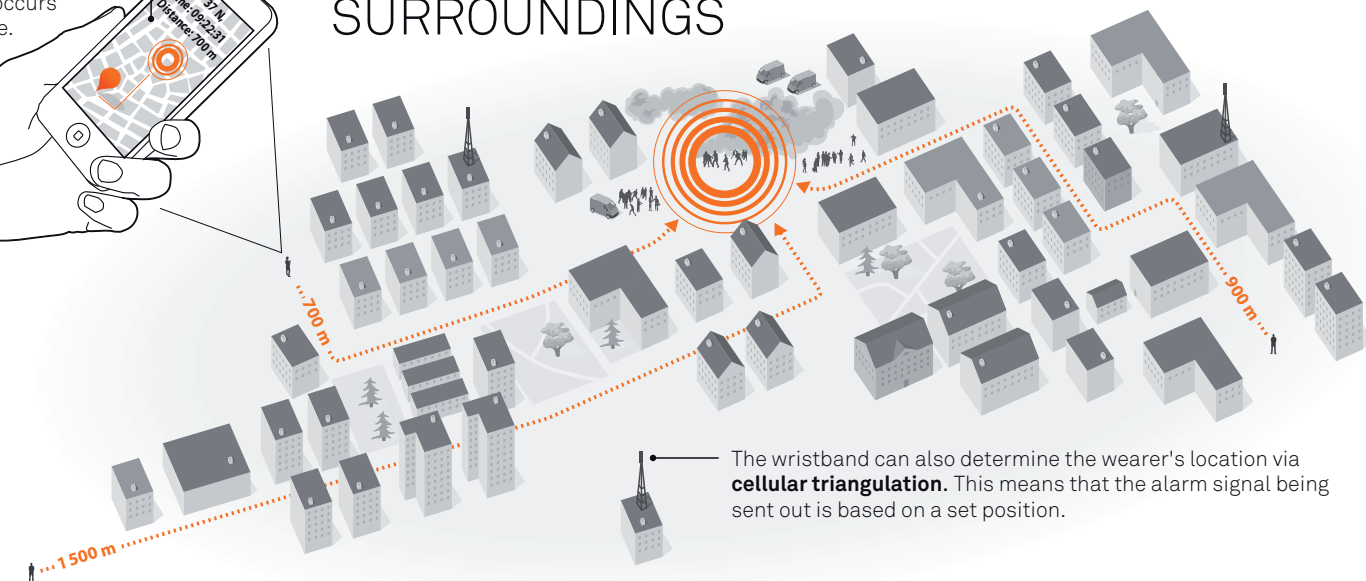

1 THE ALARM IS ACTIVATED WHEN A HUMAN RIGHTS DEFENDER IS ATTACKED

2 Selected people in the neighbourhood receive the alarm signal via a smartphone application and can quickly get to the location of the attack. At the same time, the alarm signal is sent to the Civil Rights Defenders headquarters in Stockholm, Sweden.

The exact location and time that an attack occurs is visible.

SURROUNDINGS

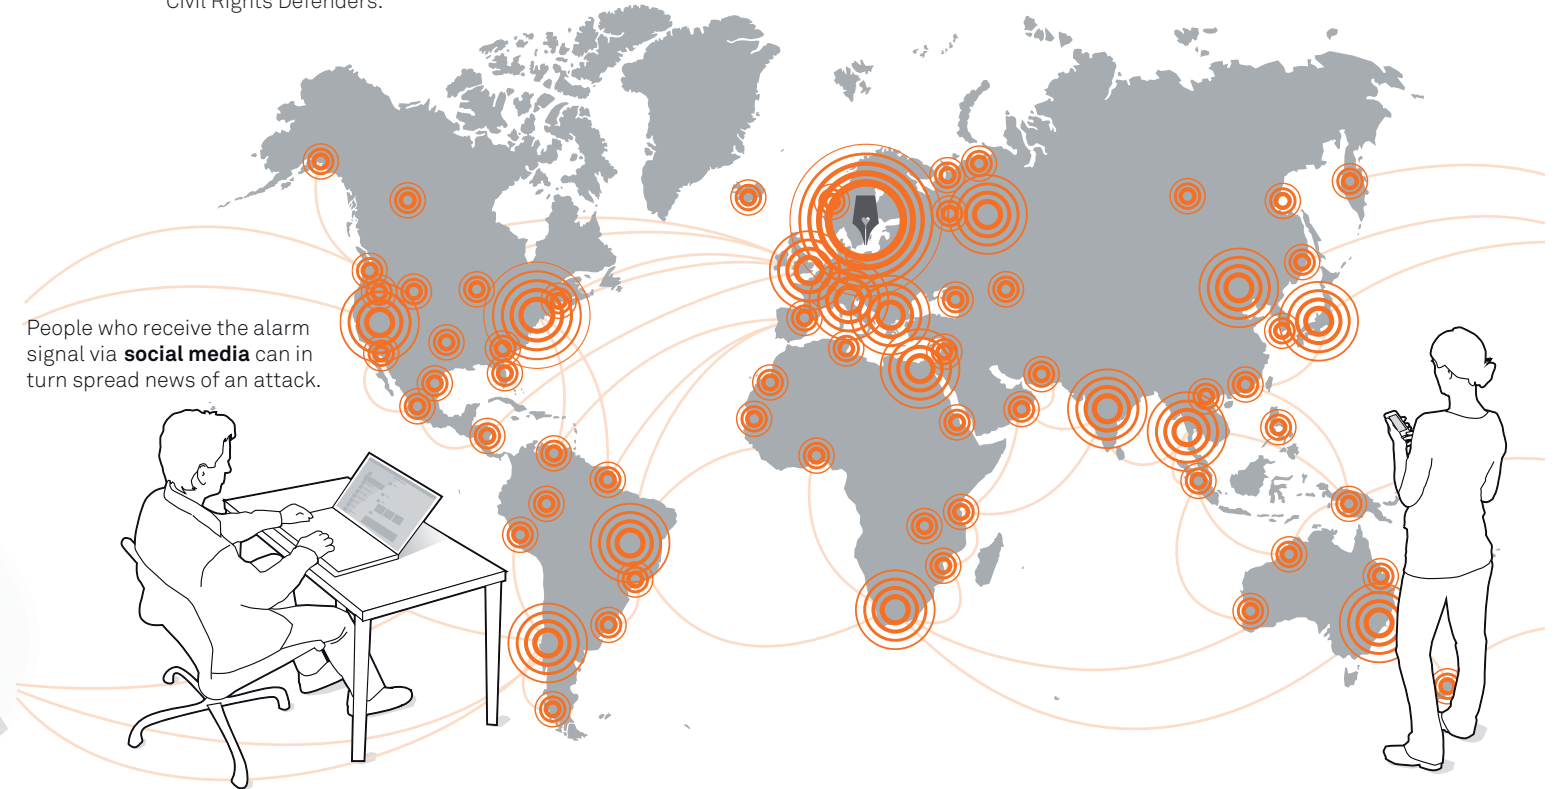

The wristband can also determine the wearer's location via **cellular triangulation**. This means that the alarm signal being sent out is based on a set position.

3 From Civil Rights Defenders in Stockholm the alarm signal is sent out via mobile (SMS), email and social media such as Facebook and Twitter.

Within a **few minutes** after the alarm has been activated, it can be forwarded from Civil Rights Defenders.

4 THE WORLD WILL KNOW

If an attack occurs, millions of people can know about it and put pressure on those who are responsible.
